

Data Scientist (Contractor), Machine Learning,

Bangalore, IN

Responsibilities

We are looking for a capable data scientist to join the Analytics team, reporting locally in India Bangalore. This person's responsibilities include research, design and development of Machine Learning and Deep Learning algorithms to tackle a variety of Fraud oriented challenges. The data scientist will work closely with software engineers and program managers to deliver end-to-end products, including: data collection in big scale and analysis, exploring different algorithmic approaches, model development, assessment and validation – all the way through production.

Qualifications

At least 3 years of hands-on development of complex Machine Learning models using modern frameworks and tools, ideally Python based.

Solid understanding of statistics and applied mathematics

Creative thinker with a proven ability to tackle open problems and apply non-trivial solutions.

Experience in software development using Python, Java or a similar language.

Any Graduate or M.Sc. in Computer Science, Mathematics or equivalent, preferably in Machine Learning

Ability to write clean and concise code

Quick learner, independent, methodical, and detail oriented.

Team player, positive attitude, collaborative, good communication skills.

Dedicated, makes things happen.

Flexible, capable of making decisions in an ambiguous and changing environment.

Advantages:

Prior experience as a software developer or data engineer – advantage

Experience with Big data – advantage

Experience with Spark – big advantage

Experience with Deep Learning frameworks (PyTorch, TensorFlow, Keras) – advantage.

Experience in the Telecommunication domain and/or Fraud prevention - advantage
